GeneXus™ GXplorer™

Grow thru knowledge
Xtend beyond technology

| Key Benefits

- Implement a more agile business intelligence solution with the lowest total cost (development, implementation and maintenance) on the market.
- Have local and remote access to your information through the Web.
- Ensure access to the necessary information according to the user's profile.
- Build your queries by using a simple and intuitive interface, from an environment already familiar to you: Microsoft Excel.

| Key Features

Manages Your Entire Data Warehouse Life-cycle

Your business measurement model is defined as a GeneXus knowledge base, which automates your data warehouse creation, loading of data and maintenance.

Operational databases can be built with or without GeneXus.

Enables Incremental Development

The automatic change management allows for the incremental development of data warehouse solutions, avoiding oversized projects and budgets.

Automatic Change Management

When facing changes in the data warehouse components or in their operational databases, GeneXus and GXplorer automatically modify the rest of the components.

Technology Independence

The integration between GeneXus and GXplorer ensures the portability of all the components of your solution to different platforms, without changing your specification.

Intuitive End User Interface

GXplorer OLAP works as an Excel add-in, and also as a Web interface, that guide users in the definition of their reports, and grant the access to the information anytime, anywhere.

The integration with Excel provides all the power of Excel to manipulate and present data.
